GigaBit Coin (GBC) – Whitepaper

Version 1.0 | Released: 30 June 2025

Blockchain: Binance Smart Chain (BEP-20)

1. Introduction

GigaBit Coin (GBC) is a BEP-20 token designed to fuel community-driven liquidity growth, reward decentralized participation, and lay the foundation for future DeFi integrations. Built on the Binance Smart Chain, GBC focuses on fair token distribution, verified on-chain activity, and reward systems based on actual user contributions — especially from liquidity providers.

2. Project Overview

• Token Name: GigaBit Coin

• Symbol: GBC

• **Network:** Binance Smart Chain (BEP-20)

• Decimals: 18

• Release Date: 30 June 2025

Contract Address: 0xBc20ADa73E3138f663A864156f940F7FA212EdA1

• Source Code: GitHub - GBC Contract

3. Token Utility

GBC serves as a utility token within its ecosystem to:

Reward users who add liquidity to decentralized exchanges (DEXs)

- Distribute airdrops based on LP contribution and verifiable activity
- Support staking, future governance, and DeFi applications
- Provide transparency through verifiable smart contracts and BSC analytics tools

4. Tokenomics

The GBC token has a total supply structured to balance immediate community rewards with long-term sustainability and project growth.

Allocation Breakdown

Category	Allocation	Purpose
Community Airdrops	35%	Rewarding LP providers, wallet holders, and active participants
Liquidity Incentives	25%	Supporting PancakeSwap LPs, yield farming, and liquidity depth
Development Fund	15%	Platform development, integrations, and long-term feature rollouts
Marketing & Partnerships	10%	Exchange listings, promotions, collaborations
Ecosystem Growth	10%	Future dApps, DAO initiatives, or cross-chain bridging
Team Reserve (vested)	5%	Long-term alignment; locked to prevent early dumps

Locking Strategy

Category	Lock/Vesting Plan
Team Reserve	2-year vesting, with 6-month initial cliff
Development Fund	12-month linear release

5. Roadmap

Q2 2025

- GBC Token deployed on Binance Smart Chain
- Verified source code and metadata submitted
- Initial liquidity pool created on PancakeSwap
- LP contribution tracking and airdrop setup begins

Q3 2025

- Launch dashboard for airdrop + LP verification
- Begin community growth campaigns
- Submit listings to CoinMarketCap & CoinGecko
- Monitor and expand liquidity depth

Q4 2025

- Introduce staking module
- Begin DAO governance design
- Explore cross-chain bridge (BSC to Ethereum/Polygon)
- Release v2 of GBC analytics and tracking tools

6. Community Airdrops

Airdrops are a central part of GBC's growth strategy. Unlike random giveaways, GBC airdrops are based on:

- LP contribution
- Wallet verification (on-chain)
- LP burn activity (optional, bonus multiplier)

Airdrop eligibility is provable, reducing fraud and increasing transparency. Users can verify their eligibility using the planned GBC dashboard.

7. Smart Contract & Transparency

GBC's source code is verified and publicly available on GitHub and BscScan. The contract is mintable, allowing controlled expansion of supply if required for staking or ecosystem use. All minting events are traceable via the blockchain.

- Smart Contract on BscScan
- GitHub Source Code

8. Future Vision

While GBC currently focuses on community incentives, liquidity depth, and LP rewards, the long-term goal is to evolve into a robust DeFi ecosystem. This includes:

- DAO voting
- DeFi staking
- NFT reward utilities
- Cross-chain capabilities

GBC aims to align community participation with real, on-chain proof-of-contribution metrics.
